Q1.
The maximum transverse speed for a particle on a string carrying a sinusoidal wave is $v_{s}$. When the displacement of a point on the string is half its maximum, the speed of the point is:
A) $\sqrt{3} v_{s} / 2$
B) $v_{s} / 2$
C) $v_{s} / 4$
D) $3 v_{k} / 4$
E) $v_{s} / 3$

Q2.
A transverse sinusoidal travelling wave on a stretched string is given by:

$$
y(x, t)=0.00230 \sin (6.98 x+742 t),
$$

where $x$ and $y$ are in meters, and $t$ is in seconds. The length of the string is 1.35 m and its mass is 3.38 g . What is the average power carried by the wave?
A) 0.387 W
B) 0.774 W
C) 0.194 W
D) 0.457 W
E) 0.513 W

Q3.
Two identical sinusoidal waves travel simultaneously in the same direction along the same string. Each wave has an amplitude of $y_{m}$. If the amplitude of the resultant wave is $y_{m} / 2$, what is the phase difference between the two waves?
A) $151^{\circ}$
B) $75.5^{\circ}$
C) $120^{\circ}$
D) $60.0^{\circ}$
E) $110^{\circ}$

## Q4.

Standing waves are produced by the interference of two traveling sinusoidal waves, each of frequency 100 Hz . The distance from the $2^{\text {nd }}$ node to the $5^{\text {th }}$ node is 60 cm . The wavelength of each of the two original waves is:
A) 40 cm
B) 50 cm
C) 15 cm
D) 20 cm
E) 30 cm

Q5.
Two sinusoidal waves, each of wavelength 5 m and amplitude 10 cm , travel in opposite directions on a $20-\mathrm{m}$ stretched string which is clamped at each end. Excluding the nodes at the ends of the string, how many nodes appear in the resulting standing wave?
A) 7
B) 8
C) 9
D) 4
E) 5

## Q6.

Two identical strings (same mass and length), each fixed at both ends, are arranged near each other. If string A starts oscillating in its fundamental mode, it is observed that string B will begin vibrating in its third normal mode $(n=3)$. What is the ratio of the tension in string B to that in string A?
A) $1 / 9$
B) 9
C) $1 / 3$
D) 3
E) 1

## Q7.

The displacement of a sound wave in air is given by:

$$
s(x, t)=\left(7.00 \times 10^{-6}\right)[\cos (5.23 x-1800 t)],
$$

where $x$ and $s$ are in meters and $t$ is in seconds. What is the pressure amplitude of this wave?
[The density of air is $1.21 \mathrm{~kg} / \mathrm{m}^{3}$ ]
A) 5.25 Pa
B) 4.31 Pa
C) 8.62 Pa
D) 9.54 Pa
E) 1.32 Pa

## Q8.

Two sound sources are driven by the same generator and emit sound waves with frequency 688 Hz .
An observer is at a point on the line joining the two sources, and is at a point of destructive interference. What is the shortest distance the observer should walk on the line joining the sources to move to a point of constructive interference?
[The speed of sound in air is $343 \mathrm{~m} / \mathrm{s}$ ]
A) 0.125 m
B) 0.250 m
C) 0.375 m
D) 0.500 m
E) 0.675 m

Q9.
An observer is 50 m from a sound source. If he moves to a distance of 100 m from the source, the change in sound level (in dB ) is:
A) -6.0
B) +6.0
C) +1.7
D) -1.7
E) +20

Q10.

| Coordinator: $m$ | Sunday, March 28, 2010 | Page: 3 |

A tube of length $L$ is open at both ends. The second harmonic frequency of this tube is $F$. The tube is then closed at one end, and its length is adjusted so that its fundamental frequency is equal to $F$. What is the new length?
A) $\mathrm{L} / 4$
B) $\mathrm{L} / 2$
C) 2 L
D) 4 L
E) L

## Q11.

A stationary source emits a sound wave of frequency $f$. A man travels toward the source at half the speed of sound. The frequency as detected by the man is:
A) $3 \mathrm{f} / 2$
B) $2 f / 3$
C) f
D) $2 f$
E) 3 f

Q12.
Two containers A and B, each having 1.0 kg of water, are initially at $20^{\circ} \mathrm{C}$. Container A is heated by 10 K , while container B is heated by $10 \mathrm{~F}^{\circ}$. Then, they are mixed. What is the final temperature?
A) $27.8^{\circ} \mathrm{C}$
B) $25.0^{\circ} \mathrm{C}$
C) $22.2{ }^{\circ} \mathrm{C}$
D) $32.2^{\circ} \mathrm{C}$
E) $17.8^{\circ} \mathrm{C}$

## Q13.

A steel gas tank of volume $0.0700 \mathrm{~m}^{3}$ is filled completely with gasoline. The temperature of the tank increased from 20.0 to $50.0^{\circ} \mathrm{C}$. How much gasoline has spilled out of the tank? For steel, the coefficient of linear expansion is $12.0 \times 10^{-6}\left({ }^{\circ} \mathrm{C}\right)^{-1}$. For gasoline, the coefficient of volume expansion is $9.50 \times 10^{-4}\left({ }^{\circ} \mathrm{C}\right)^{-1}$.
A) $1.92 \times 10^{-3} \mathrm{~m}^{3}$
B) $2.52 \times 10^{-3} \mathrm{~m}^{3}$
C) $1.69 \times 10^{-3} \mathrm{~m}^{3}$
D) $4.21 \times 10^{-3} \mathrm{~m}^{3}$
E) $7.56 \times 10^{-3} \mathrm{~m}^{3}$

## Q14.

You take a block of ice at $0^{\circ} \mathrm{C}$ and add heat to it at a steady rate. It takes time $\boldsymbol{t}$ to completely convert the block of ice to steam at $100^{\circ} \mathrm{C}$. What do you have at time $\boldsymbol{t} / 2$ ?
A) A mixture of water and steam at $100^{\circ} \mathrm{C}$.
B) All ice at $0^{\circ} \mathrm{C}$.
C) Water at a temperature between $0^{\circ} \mathrm{C}$ and $100^{\circ} \mathrm{C}$.
D) A mixture of ice and water at $0^{\circ} \mathrm{C}$.
E) All steam at $100^{\circ} \mathrm{C}$.

Q15.
One end of an insulated metal rod is maintained at $100^{\circ} \mathrm{C}$, and the other end is maintained at $0.00{ }^{\circ} \mathrm{C}$ by an ice-water mixture. The rod is 60.0 cm long and has a cross sectional area of $1.25 \mathrm{~cm}^{2}$. The heat conducted by the rod melts 8.50 g of ice in 10.0 min . What is the thermal conductivity of the rod?
A) $226 \mathrm{~W} / \mathrm{m} . \mathrm{K}$
B) $377 \mathrm{~W} / \mathrm{m} . \mathrm{K}$
C) $136 \mathrm{~W} / \mathrm{m} . \mathrm{K}$
D) $181 \mathrm{~W} / \mathrm{m} . \mathrm{K}$
E) $339 \mathrm{~W} / \mathrm{m} . \mathrm{K}$

## Q16.

In the p-V diagram shown in Figure 1, 150 J of heat is added to the system in process AB , and 600 J of heat is added to the system in process BD . What is the total heat added in process ACD ?

Fig\#
\#:

A) 600 J
B) 900 J
C) 750 J
D) 690 J
E) 810 J

## Q17.

Five moles of an ideal monatomic gas with an initial temperature of $127^{\circ} \mathrm{C}$ expand, and in the process absorb 1200 J as heat and do 2100 J of work. What is the final temperature of the gas?
A) $113^{\circ} \mathrm{C}$
B) $141^{\circ} \mathrm{C}$
C) $180^{\circ} \mathrm{C}$
D) $74{ }^{\circ} \mathrm{C}$
E) $127^{\circ} \mathrm{C}$

Q18.
In an adiabatic process for an ideal gas, the pressure decreases. Which of the following statements is CORRECT?
A) The internal energy decreases.
B) The internal energy increases.

| Phys102 | First Major-092 | Zero Version |
| :--- | ---: | ---: |
| Coordinator: $m$ | Sunday, March 28, 2010 | Page: 5 |

C) The internal energy remains constant.
D) The work done is zero.
E) The work is done on the system.

Q19.
Heat flows into a monatomic gas, and the volume increases while the pressure is kept constant. What fraction of the heat energy is used to do the expansion work of the gas?
A) $2 / 5$
B) $1 / 2$
C) $5 / 3$
D) $3 / 5$
E) $4 / 5$

Q20.
Two moles of an ideal monatomic gas go through the cycle shown in the $p-V$ diagram in Figure 2. For the complete cycle, 800 J of heat flows out of the gas. States A and B have temperatures $T_{A}=200$ K and $T_{B}=300 \mathrm{~K}$. What is the work during process $\mathrm{C} \rightarrow \mathrm{A}$ ?

Fig\#

A) -2462 J
B) +2462 J
C) +862 J
D) -862 J
E) -1662 J

## Physics 102 Major1 Formula sheet

$$
\mathrm{f}_{\mathrm{n}}=\frac{\mathrm{nv}}{2 \mathrm{~L}}, \quad \mathrm{n}=1,2,3, \ldots
$$
