Department of Physics

PHYS102-052
FINAL EXAM
Test Code: 002

Monday $5^{\text {th }}$ June 2006<br>Exam Duration: 3hrs (from 7:30am to 10:30am)

Name:
Student Number:
Section Number:

1. Which of the following statements is TRUE?
A) In a uniform magnetic field, faster protons make circles in shorter times than slower protons.
B) The direction of magnetic forces is the same for a proton and electron moving in the same direction.
C) In a uniform magnetic field, there is always non-zero force on a moving charge particle.
D) A magnetic field alone cannot accelerate a moving charged particle.
E) A magnetic field alone cannot change the speed of a moving charged particle.
2. Calculate the equivalent resistance between $a$ and $b$ for the circuit shown in Figure 3.
A) $6.5 \Omega$.
B) $3.4 \Omega$.
C) $4.5 \Omega$.
D) $2.4 \Omega$.
E) $1.4 \Omega$.
3. The electric flux leaving a non-conducting sphere is 350 Vm . If the radius of the sphere is 5 cm , the charge density of the sphere is:
A) $5.9 \mu \mathrm{C} / \mathrm{m}^{3}$.
B) zero.
C) $2.5 \mu \mathrm{C} / \mathrm{m}^{3}$.
D) $8.9 \mu \mathrm{C} / \mathrm{m}^{3}$.
E) $1.3 \mu \mathrm{C} / \mathrm{m}^{3}$.
4. The potential at point P shown in figure 1 is 20 V . What is the potential at point $\mathbf{Q}$.
A) 30 V .
B) 20 V .
C) -20 V .
D) 18 V .
E) -18 V .
5. Two capacitors: $\mathrm{C}_{1}=2 \mu \mathrm{~F}$ and $\mathrm{C}_{2}=1 \mu \mathrm{~F}$ are connected in parallel. A constant voltage of 10 V is applied across both capacitors. The CORRECT statement is?
A) The potential difference across $\mathrm{C}_{1}$ is half the potential difference across $\mathrm{C}_{2}$.
B) The charge on $\mathrm{C}_{1}$ is half the charge on $\mathrm{C}_{2}$.
C) The energy stored in both capacitors is the same.
D) Energy stored in $\mathrm{C}_{1}$ is twice the energy stored in $\mathrm{C}_{2}$.
E) Energy stored in $\mathrm{C}_{1}$ is half the energy stored in $\mathrm{C}_{2}$.
6. A 5 g of ice at $0^{\circ} \mathrm{C}$ is mixed with 150 g of unknown material at $1^{\circ} \mathrm{C}$. If all the ice melts and the equilibrium temperature of the mix is $0^{\circ} \mathrm{C}$, what is the specific heat of the unknown material?
A) $7.5 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$.
B) $80 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$.
C) $0.53 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$.
D) $4.16 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$.
E) $11 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$.
7. Two charges lie on the x axis: $\mathrm{Q}_{1}=-1 \times 10^{-8} \mathrm{C}$ is at $\mathrm{x}=0.01 \mathrm{~m}, \mathrm{Q}_{2}=5 \times 10^{-8} \mathrm{C}$ is at $\mathrm{x}=$ 0.03 m , the electric field at the origin is:
A) $4.0 \times 10^{5} \mathrm{~N} / \mathrm{C}$ along +x -axis.
B) $14.0 \times 10^{5} \mathrm{~N} / \mathrm{C}$ along +x -axis.
C) $9.0 \times 10^{5} \mathrm{~N} / \mathrm{C}$ along +x -axis.
D) $5.0 \times 10^{5} \mathrm{~N} / \mathrm{C}$ along - x -axis.
E) $4 \times 10^{5} \mathrm{~N} / \mathrm{C}$ along - x -axis.
8. Two long straight current-carrying parallel wires cross the x -axis and carry currents I and 3I in the same direction, as shown in Figure 4. At what value of $x$ is the net magnetic field zero?
A) 3 cm .
B) 4 cm .
C) -3 cm .
D) 1 cm .
E) -1 cm .
9. A conducting sphere has a potential of 400 V at its surface. If the radius of the sphere is 5 cm , what is the electric potential at a distance 2 cm from the center of the sphere?
A) -400 V .
B) 400 V .
C) 0 V .
D) 100 V .
E) -64 V .
10. Figure 6 shows a long straight wire and a circular loop $(\mathrm{R}=4 \mathrm{~cm})$, both are carrying the same current $\mathrm{I}=25 \mathrm{~A}$. Calculate the value of the magnetic field at the center of the loop.
A) $8.8 \times 10^{-4} \mathrm{~T}$.
B) $4.1 \times 10^{-4} \mathrm{~T}$.
C) $9.4 \times 10^{-4} \mathrm{~T}$.
D) $1.2 \times 10^{-4} \mathrm{~T}$.
E) $5.2 \times 10^{-4} \mathrm{~T}$.
11. A wire has $25 \Omega$ resistance. Another wire, of the same material, has half the length and half the diameter of the first wire. The resistance of the second wire is:
A) $50 \Omega$.
B) $100 \Omega$.
C) $20 \Omega$.
D) $25 \Omega$.
E) $80 \Omega$.
12. A 12 V battery supplies 100 watts power to two identical bulbs connected in series. The resistance of each bulb is:
A) $1.2 \Omega$
B) $0.7 \Omega$
C) $0.5 \Omega$
D) $2.7 \Omega$
E) $0.3 \Omega$
13. The average power supplied by a string vibrating at a frequency $f$ is 2.4 mW . The amplitude of the wave is 1.5 mm and its speed is $86.6 \mathrm{~m} / \mathrm{s}$. If the linear density of the string is $2 \times 10^{-3} \mathrm{~kg} / \mathrm{m}$ what is the frequency of vibration?
A) 38 Hz .
B) 18 Hz .
C) 12 Hz .
D) 22 Hz .
E) 14 Hz .
14. What is the angle between a $1.0-\mathrm{mT}$ uniform magnetic field and the velocity of an electron, if the electron has an acceleration of $7.0 \times 10^{12} \mathrm{~m} / \mathrm{s}^{2}$ and a speed of $7.0 \times 10^{4} \mathrm{~m} / \mathrm{s}$ ?
A) $90^{\circ}$
B) $30^{\circ}$
C) $55^{\circ}$
D) $25^{\circ}$
E) $35^{\circ}$
15. A cylindrical copper conductor is 10 cm long and has a resistivity $\rho=1.68 \times 10^{-8} \Omega$.m. If a potential difference of 100 Volts is applied across the conductor, the resulting current density J in the conductor is:
A) $9 \times 10^{8} \mathrm{~A} / \mathrm{m}^{2}$
B) $6 \times 10^{10} \mathrm{~A} / \mathrm{m}^{2}$
C) $3 \times 10^{11} \mathrm{~A} / \mathrm{m}^{2}$
D) $6 \times 10^{7} \mathrm{~A} / \mathrm{m}^{2}$
E) $1 \times 10^{4} \mathrm{~A} / \mathrm{m}^{2}$
16. Conduction electrons move to the right in a certain wire. This indicates that:
A) the current density points right and the electric field points left.
B) the current density points left but the direction of the electric field is unknown.
C) the current density and electric field both point right.
D) the current density and electric field both point left.
E) the current density points left and the electric field points right.
17. A uniform magnetic field is perpendicular to the plane of a circular loop of cross sectional area $0.15 \mathrm{~m}^{2}$ and resistance $0.05 \Omega$. At what rate must the magnitude of the magnetic field change to induce a 1.5 A current in the loop?
A) $0.2 \mathrm{~T} / \mathrm{s}$
B) $1.5 \mathrm{~T} / \mathrm{s}$
C) $0.7 \mathrm{~T} / \mathrm{s}$
D) $0.5 \mathrm{~T} / \mathrm{s}$
E) $3.5 \mathrm{~T} / \mathrm{s}$
18. Figure 7 shows a long straight wire carrying current I in the plane of a rectangular conducting loop. Which of the following statements is CORRECT?
A) No current will be induced in the loop as the current in the straight wire decreases gradually.
B) No current will be induced if the loop is moved up parallel to the wire.
C) A counterclockwise current is induced if the loop is moved away from the wire.
D) A clockwise current is induced if the loop is moved toward the wire.
E) The induced current in the loop decreases gradually as the current in the straight wire gradually increases.
19. A wire lying along the $y$ axis from $y=0$ to $y=0.36 \mathrm{~m}$ carries a current of 2.0 mA in the negative direction of the $y$ axis. The wire fully lies in a uniform magnetic field given by $\mathrm{B}=0.36 \mathrm{i}+0.46 \mathrm{j}(\mathrm{T})$. What is the magnetic force on the wire?
A) $3.3 \times 10^{-4} \mathrm{~N}$ in the positive z direction.
B) $3.3 \times 10^{-4} \mathrm{~N}$ in the negative z direction.
C) $2.6 \times 10^{-4} \mathrm{~N}$ in the positive z direction.
D) $1.2 \times 10^{-3} \mathrm{~N}$ in the positive z direction.
E) $2.6 \times 10^{-4} \mathrm{~N}$ in the negative z direction.
20. An ideal gas with 1.2 moles expands isothermally to 5 times its initial volume. The change in entropy of the gas is:
A) $16 \mathrm{~J} / \mathrm{K}$.
B) $6 \mathrm{~J} / \mathrm{K}$.
C) $48 \mathrm{~J} / \mathrm{K}$.
D) $12 \mathrm{~J} / \mathrm{K}$.
E) $24 \mathrm{~J} / \mathrm{K}$.
21. The sound level at point $A$ is 8 dB . If point $A$ is 5 m from the sound source, then the power emitted from the source is:
A) 5 nW .
B) 2 nW .
C) 1 nW .
D) 3 nW .
E) 4 nW .
22. In Figure 2, $\mathrm{R}_{1}=\mathrm{R}_{2}=\mathrm{R}_{3}=5 \Omega$. What is the value of the emf of the second battery $\varepsilon_{2}$.
A) 20 V .
B) 10 V .
C) 12 V .
D) 5 V .
E) 15 V .
23. Figure 5 shows 4 wires caring currents: $\mathrm{I}_{1}, \mathrm{I}_{2}, \mathrm{I}_{3}$ and $\mathrm{I}_{4}$. The value of the line integral $\oint B . d s$ shown in the figure is:
A) $5.9 \times 10^{-6} \mathrm{~T} . \mathrm{m}$
B) $2.7 \times 10^{-6} \mathrm{~T} . \mathrm{m}$
C) $1.4 \times 10^{-6} \mathrm{~T} . \mathrm{m}$.
D) $3.8 \times 10^{-6} \mathrm{~T} . \mathrm{m}$.
E) $7.8 \times 10^{-6} \mathrm{~T} . \mathrm{m}$.
24. An ideal gas has a volume of $0.25 \mathrm{~m}^{3}$ and is at $25^{\circ} \mathrm{C}$ and 1 atmospheric pressure. The gas expands to $0.45 \mathrm{~m}^{3}$, and the pressure is reduced to half its initial value. The new temperature is:
A) 189 K .
B) 438 K .
C) 268 K .
D) 323 K .
E) 167 K .
25. A $2.5 \times 10^{4} \Omega$ resistor and a capacitor are connected in series and then a 15 V potential difference is applied across them. The potential difference across the capacitor rises to 10 V in $2.6 \mu \mathrm{~s}$. Find the capacitance.
A) $95 \mu \mathrm{~F}$.
B) $90 \mu \mathrm{~F}$.
C) 109 pF .
D) 82 pF .
E) 46 pF .
26. Figure 8 shows a metal rod of length 25 cm moving at a constant velocity along two parallel metal rails. If the magnetic field is 0.35 T into the page, and the induced emf is 15 mV , calculate the speed of the metal bar.
A) $17 \mathrm{~cm} / \mathrm{s}$.
B) $34 \mathrm{~cm} / \mathrm{s}$.
C) $8 \mathrm{~cm} / \mathrm{s}$
D) $14 \mathrm{~cm} / \mathrm{s}$.
E) $25 \mathrm{~cm} / \mathrm{s}$.
27. Consider three point charges $\mathrm{q}_{1}, \mathrm{q}_{2}$ and $\mathrm{q}_{3}$. If $\mathrm{q}_{1}$ repels $\mathrm{q}_{3}$ and $\mathrm{q}_{3}$ attracts $\mathrm{q}_{2}$, then one possibility is that:
A) $q_{1}$ is negative, $q_{2}$ and $q_{3}$ are positive.
B) $\mathrm{q}_{1}$ is positive, $\mathrm{q}_{2}$ and $\mathrm{q}_{3}$ are negative.
C) $q_{1}, q_{2}$ and $q_{3}$ are all positive.
D) $q_{1}$ and $q_{3}$ are positive and $q_{2}$ is negative.
E) $\mathrm{q}_{1}, \mathrm{q}_{2}$ and $\mathrm{q}_{3}$ are all negative.
28. A solenoid is 3.0 cm long and has a radius of 0.50 cm . It is wrapped with 500 turns of wire carrying a current of 2.0 A . The magnetic field at the center of the solenoid is:
A) $1.3 \times 10^{-3} \mathrm{~T}$.
B) 16 T .
C) $9.9 \times 10^{-8} \mathrm{~T}$.
D) 20 T .
E) $4.2 \times 10^{-2} \mathrm{~T}$.
29. A uniform magnetic field of 2.0 T along the positive z -axis crosses an electric field E . What is the electric field needed to guide an electron with a speed of $40 \mathrm{~km} / \mathrm{s}$ along a straight line in the positive x -axis direction?
A) $20 \mathrm{kV} / \mathrm{m}$ along the negative z -axis.
B) $20 \mathrm{kV} / \mathrm{m}$ along the positive x -axis.
C) $80 \mathrm{kV} / \mathrm{m}$ along the positive y -axis.
D) $20 \mathrm{kV} / \mathrm{m}$ along the negative y -axis.
E) $80 \mathrm{kV} / \mathrm{m}$ along the negative y -axis.
30. A long straight wire carries a current that increases at a rate of $6 \times 10^{4} \mathrm{~A} / \mathrm{s}$. The wire passes through the center of a circular loop of radius 5 cm , as shown in Figure 9. The induced emf in the loop is:
A) 3.2 mV .
B) 8.4 mV .
C) 0 mV .
D) 1.9 mV .
E) 4.5 mV .
